

ZONEALARM®

Internet Security Suite

**License up to 4 computers
for \$1.99 per month**

60-Day Free Trial

The Most Complete Internet Security

Whenever a computer is connected to the Internet, it becomes a potential target for hackers. Using easily available tools like spyware, worms and Trojan horses, computer criminals can snoop through private records, steal confidential information, take control of a PC, and even hijack users' identities—often without their knowledge.

ZoneAlarm® Internet Security Suite is the most complete Internet security solution available because it provides protection at every layer, from the PC to you, and it stops security threats before they reach a PC. Its comprehensive features, including integrated antivirus, anti-spyware, and the proprietary operating system firewall (OSFirewall™), protect a computer from the network down to its core. Featuring the world's #1 network and program firewall with award-winning antivirus, ZoneAlarm Internet Security Suite uses multiple layers of protection to make your PC invisible to hackers. The new antivirus engine delivers the ultimate in virus protection with hourly signature updates, expanded coverage, and faster detection to find and remove even the most recent and aggressive viruses. Identity theft protection secures private information, online or in the physical world. And the proactive SmartDefense™ Service keeps computers updated with the latest security intelligence gathered from ZoneAlarm experts and the user community.

Trusted by millions of users worldwide, the award-winning ZoneAlarm Internet Security Suite provides the simplicity novices want without compromising the rigorous security needed to keep you safe. There's simply no better way to protect a connected PC from Internet security threats.

Network and Program Firewall

- World's #1 network and program firewall uses multiple layers of protection.
- Barricades every PC port from external attack.
- Makes PC invisible to hackers when connected to the Internet.
- Prevents malicious programs from accessing the Internet and transferring stolen data.

Operating System Firewall (OSFirewall™)

- Detects suspicious behavior and disables dangerous programs on the operating system.
- Monitors program installation, registry changes, and file access down to the operating system, as well as monitoring additional program actions for more thorough protection against spyware, Trojan horses, rootkits, kernel-level attacks, and other threats.

Antivirus

- Scans for and removes viruses continuously—even the most persistent, hard-to-find programs that infiltrate at the core level, with an award-winning engine.

- Advanced proactive detection uses heuristic, behavior and pattern-based analysis to detect unknown viruses and protect against emerging threats.
- Automatic hourly updates stop the newest virus attacks, with new signatures that are available faster. Reduced update sizes make updates virtually instant.
- Broader coverage also protects from keyloggers, backdoors and other dangerous malware missed by most antivirus engines.

Anti-Spyware

- Stops spyware already on your PC from contacting or sending personal data to malicious sites.
- Scans for and removes spyware continuously—even the most persistent, hard-to-find programs that infiltrate at the core level.
- Advanced proactive detection uses behavior and pattern-based analysis to detect unknown spyware and protect against emerging threats.

Identity Theft Protection Center

- Extends protection to the physical world, where most identity theft occurs, while protecting the private information stored on your PC or transferred over the Internet. ZoneAlarm Internet Security Suite is the first and only personal security software to expand this vital protection beyond the desktop.
- Stops pre-approved credit card offers, which contain sensitive financial data often used by criminals for identity theft (offered via a credit industry service—US only).
- Detects theft by monitoring both cyberspace and stolen credit card lists from vendors, consumers, and the underground. Alerts you if your credit cards are stolen.
- Provides a low-cost, public records report to alert you of fraud, such as phony DMV records (US only).
- Assists identity theft victims with personal telephone counseling to guide them through resolution and recovery (US only).
- Offers identity theft education and tools to help you prevent, detect and recover from identity theft.

Game Mode

- Allows gamers to temporarily suppress security alerts with one click, for uninterrupted fun.
- Maintains maximum security during game play.

SmartDefense™ Service

- SmartDefense Advisor™ automatically provides safe recommendations on whether users should allow or deny Internet access to programs that request it.
- DefenseNet™ acts as an early warning system to keep PC security updated from the latest spyware attacks using up-to-the-minute intelligence from the ZoneAlarm community.
- Outbound filtering tells when a program on the computer is trying to access the Internet, and prevents unauthorized or unknown programs from sending out personal information.
- MD5 Signature Technology is the equivalent of a human fingerprint for programs. It helps prevent users from accidentally granting Internet access to malicious software that pretends to be legitimate.

Additional Security Features

- Anti-phishing automatically identifies and isolates dangerous email scams—even the latest ones.
- Spam blocker automatically adapts to the ever-changing techniques of professional spammers to keep inboxes clear of junk emails. Lets users update and easily maintain a list of blocked spammers.
- Wireless PC protection identifies new and unsecured networks, sets appropriate security.

- Free upgrades for one year so you always have the most current version.
- Free online technical support available 24/7 and through our automated support agent.

Easy-to-Use Security

- Pre-loaded security settings provide easy, instant protection for anyone who wants simplicity with peace of mind. Auto-Learn is a system that automatically configures security settings based on a user's unique computer environment and behavior, making the initial set-up virtually silent.
- Easy setup includes a new interface and pre-scan that make getting started even easier.
- Automatic network detection identifies new wired or wireless networks so users can adjust protection when at home, at the office, or in an Internet café.
- Automatic update notification keeps Internet security current with automatic alerts when new updates are available.

Windows 2000 Pro/XP Users Also Get:

- Spy Site Blocking prevents spyware from getting on a PC by blocking it at its #1 source: spyware distribution sites.
- Privacy protection manages or blocks unwanted ads, cookies, cache, and scripts.
- IM Protection secures instant messages—even those sent between different IM services—so they can't be monitored. Works with AOL® Instant Messenger, Yahoo® Messenger, MSN® Messenger, and Trillian.
- Parental Control enables parents and business owners to block access to offensive Web content.
- Email Security automatically quarantines suspicious inbound email attachments and blocks them from auto-launching or being opened by accident, while monitoring outgoing email for potential viruses. Prevents worms and viruses from sending infected emails to everyone in your address book.

System Requirements

- Windows® 2000 Pro, XP and Vista (32-bit)
- Intel® Pentium® III processor 450 MHz or higher (2000 Pro/XP), 800 MHz or higher (Vista)
- 50MB of available hard-disk space
- Internet access
- Minimum system RAM: 64MB (Windows 2000 Pro), 128MB (Windows XP), 512 (Windows Vista)
- Supported protocols for email protection
 - POP3 (incoming only)
 - SMTP (outgoing only)
 - IMAP4 (incoming only) – not supported for virus scanning of email
